

CONTENTS

GENERAL INTRODUCTION

What is Attachment?
What is 'Attachment Disorder'?
Early attachment: a worldwide challenge
What happens when they grow up?
It's not only your problem – it's ours
Our unconscious basic concepts of children and childhood
My own concepts
Realism: This is a handicap like any other
About terminology
What can this book give you?

PART I: AD DEVELOPMENT FROM CONCEPTION TO ADULTHOOD

CHAPTER 1: CAUSES AND SYMPTOMS

Two general causes of disorganized social behavior.
Causes and symptoms
A systemic perspective of the relationship between mother and child
Contact, self – organization and the development of constancy
Consequences of contact disruption
Normal early contact, self – organization and constancy
The function of contact in child development
The organization of the Self
The development of constancy

CHAPTER 2: STAGES IN SELF-ORGANIZATION

Stage I: Physical Self – organization
Stage II: Sensory organization
Stage III: Sensory – motor/ movement organization
Stage IV: Personality organization
Stage V: Social organization
Stage development and diagnosis

CHAPTER 3: CONTACT DISRUPTION BEFORE AGE 2 – SYMPTOMS OF PHYSICAL INSTABILITY

Contact disruption and failure to establish constancy
Contact disruption and the AD child
Abnormal contact between mother and child – results from studies
The genetic background
The course of pregnancy
The course of birth
Frequency of birth complications and artificial birth aid

CHAPTER 4: CONTACT DISRUPTION AND NERVOUS SYSTEM DEVELOPMENT

Central Nervous System (CNS) development
A hypothesis of neurological dysfunctions in AD
The reptile brain: regulation of the basic activity level
The emotional and social brain: linking sensation to emotional response
The cortical brain: control and focus
Checklist for deprivation symptoms in babies

CHAPTER 5: ABNORMAL SENSORY – MOTOR DEVELOPMENT IN THE TODDLER

Sensation, attention, emotion, gestalt formation: the basics of learning ability
Movement and motor development
Phases in motor development
Conclusion on motor development
Checklist for pre – school AD symptoms

CHAPTER 6: ARRESTED EMOTIONAL PERSONALITY DEVELOPMENT

Personality development: the relationship to the object (the mother) is the key to the world. Achieving object constancy
The first stages in achieving object constancy
Stage I and II: basic attachment and basic anxiety management
An example: poor basic attachment
An example: paradoxical attachment and poor anxiety management
Stage III and IV: basic internalization of the parent and basic social constancy
Emotional and cognitive deficits when arrested in stage I and II
Checklist for the AD personality function from preschooler to juvenile
The social backgrounds of AD children
The general AD risk checklist

PART II: THERAPY

GENERAL PRINCIPLES OF MILIEU THERAPY

THERAPY AT DIFFERENT STAGES OF DEVELOPMENT

CHAPTER 7: HOW CAN YOU PRACTICE MILIEU THERAPY?

Some general principles of milieu therapy
What is the difference between psychotherapy and milieu therapy?
External constancy replaces a lack of internal constancy

1. Reduce the number of contact – deleting events
2. Peel the onion: if contact fails, shift to a lower level
3. Gradually prolong and expand contact at all times
4. Postpone all common developmental thresholds
5. Find support for yourself – keep your own point of reference
6. Choose clear focus points

CHAPTER 8: MILIEU THERAPY DURING PREGNANCY, BIRTH UP TO 3

Therapy before conception

Eugenic (genetic) therapy

Therapy during pregnancy

Birth to age 3: regression therapy

Transient bonding problems and attachment disorder in adopted children.

Coping with separation, transition and attachment

CHAPTER 9: MILIEU THERAPY FOR THE PRESCHOOL CHILD

The professional's observations

Behavior in child groups

Behavior when learning or exercising

Methods: work at the relevant level of development

1. When planning your behavior towards the child, divide the child's age by 2, 3 or four.
2. Learning to make "one brick" successfully: be the mirror
3. The chain of behaviors. Creating series of bricks to form a house
4. Awareness of the relationship as well as of the exercise
5. Be aware of "the Relationship in the Mind" as well as "The relationship at work"
6. Be present – work only in the present moment and the immediate future
7. Demonstrate clear focus of authority and borders

CHAPTER 10: MILIEU THERAPY FOR THE SCHOOL AGE CHILD

The Attachment Disordered Child in the Classroom

Understanding specific learning problems in AD children

Planning the learning process and the setting

Mastering and developing the social relationship that makes learning possible

A method for developing social self-awareness in the child

1. Mapping abnormal behavior patterns
2. Directing attention towards patterns
3. Recognizing behavior patterns
4. Using the "Behavior Joystick"
5. The "Class Lab for Alternative Behavior"
6. Transferring the lab to the classroom
7. Teaching others what we do in class

Ethics

How do we start?

Summary: important goals/ success criteria

Necessary organization

Results

CHAPTER 11: DAILY LIFE IN THE FAMILY, THE FOSTER FAMILY OR THE INSTITUTION

Take away the burdens

Burden No. 1: having to decide, choose, argue, agree and feel motivated

Burden No. 2: background changes

Burden No. 3: complex social relationships and contacts

Burden No. 4: Being blamed or scolded when something goes wrong
Burden No. 5: Parents leaning on the speeder

How to acquire new skills in six steps

1. Mirroring your behavior here and now
2. Your voice as the organizer of behavior
3. The child's voice as the organizer
4. Working in parallel positions
5. Being out of sight
6. I can do it on my own!

The AD child and other children in the family

CHAPTER 12: MILIEU THERAPY FOR THE JUVENILE

- Leaving home with little baggage
- Some considerations on therapy with parents and youth

CHAPTER 13: ATTACHMENT DISORDER, SEXUAL BEHAVIOR PROBLEMS AND SEXUAL ABUSE. COPING WITH PROBLEMS GENERATED BY DELAYED PSYCHOSEXUAL DEVELOPMENT

Evolutionary and biological survival theories: sexual preferences seen as "emotional imprints"

Neurological theories

Object relations theory: immature defense mechanisms in abuser and abused.

Three degrees of arrested personality development in the abuser

Sexuality at random: the stage I abuser

Projection of the weak self: the stage II abuser

The lonely seduced child: the stage III abuser

Theories in social psychology: the frequency of abuse as a result of accessibility

Definitions of sexual abuse

Method problems when studying prevalence

Clinical observations of behavior changes and altered physical states in abused children

Effects of child abuse in adulthood

Prevention: helping the abused ad child becoming an abuser

Conclusion

PART III:

GUIDELINES FOR ORGANIZING THE THERAPEUTIC MILIEU EMOTIONAL, PHYSICAL AND SOCIAL FRAMEWORKS

CHAPTER 14: THE PERSONAL DEVELOPMENT OF THE A.D. CARETAKER

Introduction

Developmental phases of the individual AD worker and

Objectives for the supervision process

State of the magic wand

- Objectives for the supervisor

State of reality depression

- Objectives for the supervisor

Gaining authority and internal reorganization

- Objectives for the supervisor

CHAPTER 15: DEVELOPING THE PROFESSIONAL A.D. TEAM

Phases in AD team development and leadership

1. Inclusion: Creating a secure common base and identity
Leadership in the Inclusion Phase
2. Control: Realizing that we are different from each other
Leadership in the Control Phase
3. Openness/ affection – mutual exchange
Leadership in the Affection Phase

CHAPTER 16: METHODS FOR THE A.D. TEAMWORK

Some tools for team development

1. Mapping “Attachment Knowledge’ in the team
2. The “Big Ear’
3. The “Mutual supervision’ interview
4. Action Learning – a tool for analysis and alternative solutions

Conclusion to organization of the therapeutic milieu
